EDUCATION

Master of Engineering : Mechanical Engineering June 2018
Warwick University - Warwickshire, UK

SKILLS

- JavaScript
- TypeScript
- Next JS
- Node JS
- Nest JS
- React JS
- Angular
- MySQL
- PostrgeSQL
- MongoDB
- Test Driven Development
- AWS EC2,S3
- Docker
- Nginx
- Tailwind CSS
- Material UI
- SASS
- Data Structures and algorithims

WORK EXPERIENCE

Urban Hive Ltd - Full Stack Developer (Frontend Focused) November 2021 - Current

Led a team of 3 developers to build a mobile-responsive React/Node.js learning platform for students in Guinea, translating Figma designs and user requirements into **pixel-perfect, accessible UI** with a reusable component architecture and consistent design system across student and admin modules.

Designed the MongoDB data model and built RESTful APIs, integrating frontend features such as course management, add-to-cart functionality, and MTN payment gateway integration; collaborated closely with backend stakeholders to align API contracts and application flow.

Implemented global state management using Redux to control media playback behavior across the app, while introducing **test-driven development** with Jest and React Testing Library to improve component reliability, team confidence, and long-term maintainability.

Improved user experience and performance by adding offline media downloads using in-browser storage, optimizing rendering behavior, participating in code reviews, and setting up **CI/CD via AWS CodePipeline** to enforce quality standards and streamline deployments.

Implemented Google Tag Manager analytics to track sign-ups, add-to-cart actions, purchases, media downloads, and content engagement, enabling stakeholders to make **data-driven decisions** from user behavior trends.**Web module**-https://.prep.bonecole.com , **Admin** – https://bonecole-admin.netlify.app

Resident Care Homes Ltd – PHP/MYSQL Software Developer - September 2025 – Current (Contract)

Implemented an automated compliance workflow that sends scheduled email alerts to care homes when residents' risk assessments or care plans require updates—significantly reducing missed deadlines and improving operational consistency across all active homes. - **www.residentcarehub.com**

Built and deployed a comprehensive medicines and prescriptions module that gives carers real-time visibility into daily medication activity (administered, missed, withheld). Each record captures clinical details—dosage frequency, prescribing doctor, allergy checks, and staff signatures—resulting in safer medication management and improved audit readiness for 10+ care homes.

Personal Projects – Nurturer AI Agent

Built a full-stack web application that automates scheduled messaging by leveraging the OpenAI API and AWS Simple Email Service.The project "nurtures the relationship" between a user and their contact by

delivering AI-generated emails without manual intervention. Enhanced user engagement through a dynamic, animated UI using Framer Motion. - https://nurturer.ai
